# The Scheugenpflug Academy – Knowledge Well Dispensed!

The bonding, sealing and encapsulation of components is of great importance for the performance and quality of your components and products. But even the best equipment is of little use if it is not used optimally. The focus here is on the human being: in addition to the system technology, you must also be able to know, understand and master the underlying processes and interrelations for your task. This is the only way to guarantee efficiency, safety, optimum product quality – and thus added value.

With our Academy knowledge you can maximize the benefits of your dispensing system – for your company, your products and your customers.

*Rainer Haslauer, Trainer Academy*

## *What kind of know-how do you need?*

You already know Scheugenpflug as a reliable partner – from the first dispensing test to commissioning, all the way to competent support throughout the entire life cycle of your equipment. To help you maximize the benefits of your dispensing application, we now pass on our 30 years of technology and process know-how to you!

In our new Academy, you have the choice between various training courses which you can complete online, on-site or at our company - depending on your needs. We design the courses to match your individual level of knowledge and you will learn how to get the most out of your systems and products.

*Profit from our leading knowledge!*

## *What can you expect from us?*

In our trainings and seminars we provide you with the knowledge you need for your individual dispensing task.

We offer a clear understanding of your processes and tasks through discussions, group work and case methods. With many exercises at the machines as well as suitable case studies, the transfer into practice takes place immediately. Communication and analysis methods are also an important part of our training program. The transfer of knowledge is designed to be multilingual and takes intercultural factors into account.

## *Dispensing License*

In the future, the Dispensing License will document your personal knowledge that you have acquired at the Scheugenpflug Academy. It is also the admission ticket to the expert community. Within the framework of our partner network, it opens the door to further offers in the field of efficient adhesive bonding, dispensing and potting.

## E-Learning

Modern, interactive learning, regardless of time and location, industry-specific topics

## Training

### Beginner

Supplement to the instruction during commissioning. The contents are project- and equipment-related. They include the configuration as well as the setup and operation of the systems and their maintenance.

### Advanced and Expert

Expansion of existing knowledge. Here you will acquire in-depth knowledge about parameterization, programming and configuration options for your systems. Optimization potentials and individual requirements are also addressed.

### Refresher

Innovations and updates in a nutshell

## Webinars

Contents and knowledge are provided here independent of location and time. The webinars supplement and support the existing training offer.

## Course

### Beginner

Central topics are component design and adhesive properties, application and dispensing technology as well as process and quality assurance. An overview of the entire product portfolio is also provided.

### Advanced and Expert

They expand and strengthen the existing basics. This way you will become a specialist both in handling our systems and for challenging dispensing tasks.

### Refresher

New developments and regular exchange – always up-to-date

## Training

for operators, service/maintenance personnel and process/production managers

### Beginner

Manual Work Station

1.5 days

Introduction to the system, discussion of the relevant material data sheets

Semi-Automatic  
Dispensing System

2 days

Overview of functions, training setup and operation  
Basics of parameterization

System for Integration

2.5 days

Basics of programming, maintenance and troubleshooting

### Advanced

Manual Work Station

1 day

Review and expansion of the contents of the Beginner Training

Semi-Automatic  
Dispensing System

2 days

Configuration options for hardware and software  
Programming of SCP and UPIC incl. DXF import for advanced users, special functions

System for Integration

2 days

Communication and troubleshooting

### Expert

Joint development of the scope and further learning objectives

Following the clarification of the specific requirements

### Refresher

1 day

Refresher for experienced users as well as retrained and returning users

Innovations and updates to the system

Current tasks and questions

## Course

for process/production managers, integrators/automation specialists, quality managers, developers, project managers

### Beginner

Dispensing Technology

4 days

Dispensing task, component design, overview of adhesives, process and system technology of the complete portfolio, introduction to programming, maintenance and troubleshooting

### Advanced

Dispensing Technology

4 days

Expansion of the contents of the Beginner Course, chemistry of adhesives, optimization potentials, programming and configuration as well as special functions, communication and troubleshooting

### Expert

Joint development of the scope and further learning objectives

Following the clarification of the specific requirements

### Refresher

2 days

Refresher for experienced users as well as retrained and returning users

Innovations and trends regarding the product portfolio and industry in general

Exchange between experts concerning future tasks
