

The new, innovative way of dispensing

#High-Performance Mixing Tubes –

The new premium mixing solution for highest productivity

High-Performance Mixing Tubes

Homogenous mixing of highly viscous
2C materials

Highest dispensing speeds

Superior pressure stability

Accurate dispensing results

Quick and easy change

#High-Performance Mixing Tubes – The new premium mixing solution for high-class applications

High-Performance Mixing Tubes

- ✓ High-performance application with DosP DP2001
- ✓ Low volume application with DosPL DPL2001
- ✓ Designed for highest dispensing pressures
- ✓ Suitable for highly viscous media > 150.000 mPa·s

High-Quality Processes

As the requirements of the end products increase, the standards in production are also becoming more challenging. For example, safety-relevant electronics as used for autonomous driving require high-quality adhesive bonding and potting processes. However, conventional static mixing tubes cannot always handle the high throughputs and process reliability, which are top priorities here.

With our new **#High-Performance Mixing Tubes**, we enable homogeneous mixing and precise application of liquid to highly viscous 2C materials. The pressure stability is at highest level to eliminate the risk of expansion or incorrect needle positions.

An innovative design and a special manufacturing process ensure highest dispensing speeds even with highly viscous materials. Hence, the mixing tubes complete the holistic approach of **#Advanced Dispensing** and are strongly recommended for our new dispensing units.
